What is Floracen Plus?

FLORACEN PLUS

is a Probiotic oral suspension designed to help restore and maintain healthy intestinal microflora.

Suitable for pediatric and adult patients and may be taken alongside antibiotic therapy.

Key Benefits & Health Effects

1. Digestive & Gut Health

- Helps restore intestinal microflora balance after disruption (e.g., from medications, infections, stress).
- Reduces duration and severity of diarrhea in both children and adults, including acute viral or antibiotic-associated diarrhea.
- May relieve symptoms of irritable bowel syndrome (IBS) like bloating, irregular bowel movements, and abdominal discomfort.

2. During or After Antibiotic Use

It's antibiotic-resistant as a beneficial bacteria, meaning it can be taken at the same time as antibiotics to help maintain gut flora and reduce side effects like antibiotic-associated diarrhea.

3. Immune Support

Some evidence suggests modulation of the immune response – balancing immune signaling and helping regulate inflammation in the gut.

4. Resilience & Practical Benefits

Unlike many probiotics: The spores are heat and acid resistant – no refrigeration needed. They reliably reach the gut intact where they can germinate.

Common Uses & Situations

FLORACEN PLUS

People take Bacillus clausii probiotics like 4 B CFU for:

- ✓ Diarrhea
- ✓ Constipation
- ✓ Anorexia
- ✓ Stress
- ✓ Strengthen the Immune System

With the rising demand for immune-support and gut-health products in the Philippine market,

FLORACEN PLUS provides a differentiated probiotic option enhanced with Zinc, making it highly suitable for pediatric and general family use.
